

IMPLEMENT CLIENT SCRIPT & UI POLICY(INCIDENT)

PHASE 6

Project Testing

6.1 Introduction

- The Project Testing phase is performed after completing the development activities in the ServiceNow Incident module. The purpose of this phase is to verify whether the implemented UI Policy, UI Policy Action, and Client Scripts function correctly according to the defined requirements.
- The configured features are tested under different conditions to ensure proper field behaviour, validation, automatic updates, and controlled record modification.

6.2 Testing Objective

The main objectives of this testing phase are:

- To verify the High Impact UI Policy.
- To verify the UI Policy Actions.
- To verify the automatic Urgency update.
- To verify submission validation.
- To verify State editing restrictions.
- ensure valid Incident records can be saved successfully.
- To identify any unexpected behaviour in the implemented to configuration.

6.3 Test Case 1:

Activity 1: Test Mandatory Enforcement

Step 1: Navigate to Incident:

Go to Incident → Create New to open a new Incident form.

Step 2: Set the Impact Field:

Select High for the Impact field. This will trigger the UI Policy and Client Script behaviors you configured earlier.

Step 3: Leave Assigned To Empty:

Do not fill in the Assigned To field. This will test the onSubmit Client Script that prevents saving if Assigned To is missing.

Step 4: Click Submit:

Attempt to save the Incident record.

Step 5: Verify the Result:

- 1.The Incident should not be saved because Assigned To is required when Impact is High.
- 2.An error message should appear, indicating that the Assigned To field cannot be empty.
- 3.Confirm that all UI Policy actions, such as read-only fields or automated urgency updates, are working as expected.

The screenshot shows the ServiceNow 'Incident - Create INC0010009' form. The form is titled 'Incident New record'. It contains several input fields and dropdown menus. The 'Number' field is filled with 'INC0010009'. The 'Caller' field is filled with 'Adela Cervantsz'. The 'Category' is 'Inquiry / Help'. The 'Subcategory' is '-- None --'. The 'Service' field is empty. The 'Service offering' field is empty. The 'Configuration item' field is empty. The 'Channel' is '-- None --'. The 'State' is 'New'. The 'Impact' is '1 - High'. The 'Urgency' is '1 - High'. The 'Priority' is '1 - Critical'. The 'Assignment group' field is empty. The 'Assigned to' field is empty. A red error message is displayed below the 'Assigned to' field: 'Assigned To is mandatory for High impact incidents.' The 'Short description' field is filled with 'testing UI policy'. The 'Description' field is empty. At the bottom, there is a 'Related Search Results' section with a search bar containing 'testing UI policy' and a dropdown menu set to 'Knowledge & Catalog (All)'. Below this, there is a link to 'Company policies' and the text 'No description'.

6.4 Test Case 2:

Activity 2: Test Successful Save

Step 1: Fill the Assigned To Field:

Open the Incident form and select a user in the Assigned To field. This ensures the onSubmit Client Script condition is satisfied.

Step 2: Click Submit:

Attempt to save the Incident record.

Step 3: Verify the Result:

- The Incident should be saved successfully without any errors.
- Confirm that all other configured behaviors, such as:
 1. Urgency auto-setting (from the onChange Client Script)
 2. Read-only fields (from the UI Policy Action)
 3. State restrictions (from the onCellEdit Client Script)

are functioning as expected

The screenshot shows the ServiceNow 'Incident - Create' form. The form is titled 'Incident - Create INC0010010'. The form fields are organized into two columns. The left column contains: Number (INC0010009), * Caller (Adela Cervantsz), Category (Inquiry / Help), Subcategory (-- None --), Service, Service offering, Configuration item, * Short description (testing UI policy), and Description. The right column contains: Channel (-- None --), State (New), Impact (1 - High), Urgency (1 - High), Priority (1 - Critical), Assignment group, and Assigned to (Beth Anglin). The form has a 'Submit' button and a 'Resolve' button. Below the form, there is a 'Related Search Results' section with a search bar containing 'testing UI policy' and a dropdown menu set to 'Knowledge & Catalog (All)'. The search results show two items: 'Company policies' with 'No description' and 'Whitelist IP' with 'Need to whitelist an IP address?'. There is an 'Order' button at the bottom right of the search results.

6.5 Test Case 3:

Activity 3: Reverse Condition Test

Step 1: Open an Existing Incident:

Go to Incident → Open and select an Incident where Impact is currently set to High.

Step 2: Change Impact:

Update the Impact field from High to Medium. This will test the Reverse if false functionality of your UI Policy and the behavior of your Client Scripts.

Step 3: Verify the Field Result:

1. Assigned To should no longer be mandatory.
2. Urgency should now be editable, meaning the read-only UI Policy action is reversed.

Step 4: Save the Record:

Click Submit to save the changes. The record should save successfully without errors, confirming that the reverse condition works as intended.

The screenshot shows the ServiceNow Incident form for record INC0010009. The form is divided into two main sections: 'Incident' and 'Related Search Results'. The 'Incident' section contains fields for Number (INC0010009), Caller (Adela Cervantsz), Category (Inquiry / Help), Subcategory (-- None --), Service, Service offering, Configuration item, Short description (testing UI policy), and Description. The right-hand section contains fields for Channel (-- None --), State (New), Impact (2 - Medium), Urgency (1 - High), Priority (2 - High), Assignment group (Software), and Assigned to. The 'Related Search Results' section is currently empty. The bottom of the form shows tabs for Notes, Related Records, and Resolution Information, along with buttons for Watch list, Work notes list, and Work notes.

6.6 Test Case 4:

Activity 4: Test List Edit Blocking

Step 1: Navigate to the Incident List:

Go to Incident → All to view all Incident records in a list view.

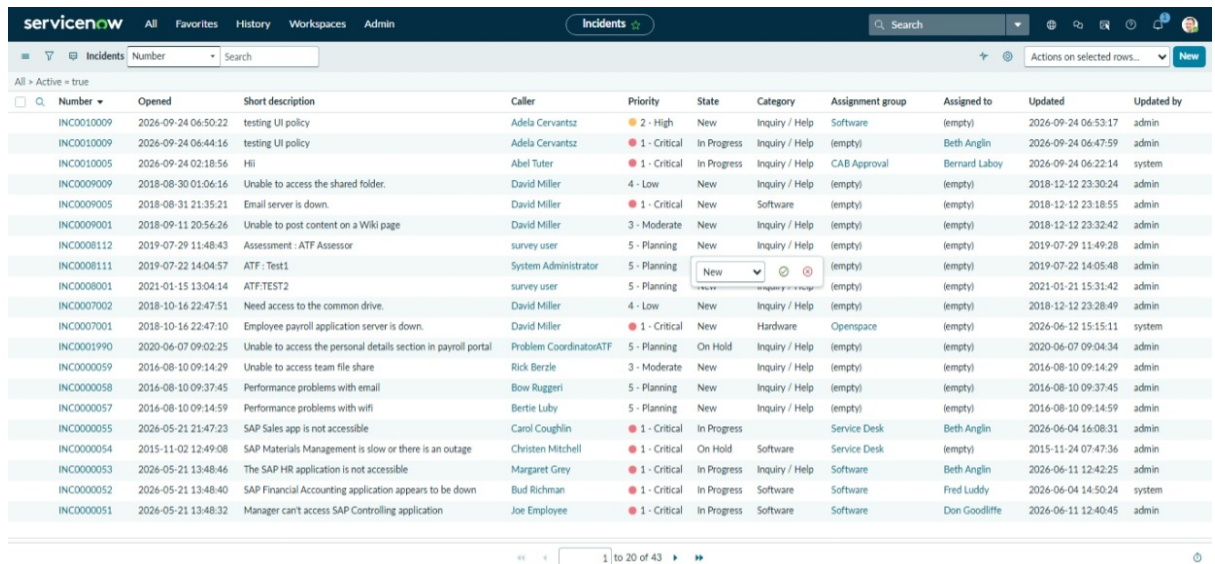

Step 2: Attempt a List Edit:

1. Locate any Incident in the list.
2. Double-click the State field to try editing it directly from the list.

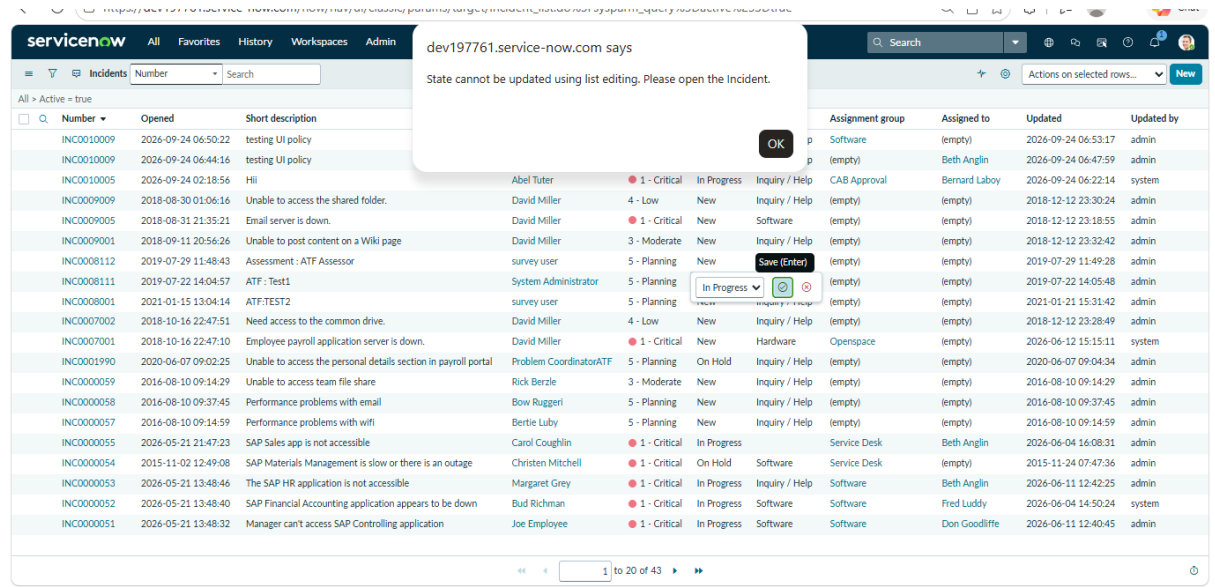

Step 3: Verify the Result:

1. An alert message should appear, indicating that direct changes to the State field are not allowed.

2. The State value should remain unchanged, confirming that the onCellEdit Client Script is working correctly.

6.7 Test Case 5:

Activity 5: Test Form-Based Update

Step 1: Open the Incident Record:

Navigate to the same Incident record you used in previous tests.

Step 2: Change the State:

On the Incident form, update the State field to a new value. This tests that changes via the form (not the list) are allowed.

Step 3: Click Update:

Save the record by clicking Update.

Step 4: Verify the Result:

1. The State change should be saved successfully.

2. Confirm that other fields, such as Assigned To and Urgency, still follow the configured UI Policy and Client Script rules.

The screenshot displays the ServiceNow Incident form for record INC0008111. The form is titled 'Incident - INC0008111' and includes a search bar and navigation tabs (All, Favorites, History, Workspaces, Admin). The form fields are organized into two columns. The left column contains fields for Number (INC0008111), Caller (System Administrator), Category (Inquiry / Help), Subcategory (None), Service, Service offering, Configuration item, Short description (ATF : Test1), and Description. The right column contains fields for Channel (None), State (In Progress), Impact (3 - Low), Urgency (3 - Low), Priority (5 - Planning), Assignment group, and Assigned to. A 'Save' button is located at the top right of the form. Below the form fields, there is a 'Related Search Results' section. The bottom section of the form includes 'Work notes' and 'Activities' (1 activity by System Administrator). The 'Field changes' section at the bottom right shows a change on 2019-07-22 14:05:17.

6.8 Testing Outcome:

The testing process verifies the major behaviours implemented during the development phase. The UI Policy and Client Scripts respond according to the defined conditions, while valid Incident records can be saved successfully.

6.9 Conclusion :

The Project Testing phase successfully validated the functionality and reliability of the configurations implemented in the ServiceNow Incident module. The test cases confirmed that the UI Policy, UI Policy Actions, and Client Scripts perform the defined operations under different conditions. The successful test results demonstrate that the implemented solution meets the specified functional requirements and provides consistent field control, validation, and record management
